**LEAKAGE RATE FOR YORK WATER-COOLED
CENTRIFUGAL AND SCREW CHILLERS**

TECHNICAL DATA

New Release

Form 160.00-TD3 (508)

The driving philosophy of YORK water-cooled chillers, manufactured by Johnson Controls, is based on efficiency and environment.

The current design of YORK water chillers includes the latest technology in “leak-free” joint connections, and state-of-the-art, shaft-seal technology, as well as market-leading efficiencies. In addition, the YORK products are ASME-stamped and undergo rigorous design review, as well as pressure testing and leak testing. Every unit must pass these tests during manufacture.

The YORK water-cooled centrifugal and screw chillers are designed to leak less than 1/2% of refrigerant charge annually, with proper maintenance and operation.
